

# Cluster Fly Treatment

## CLIENT PREPARATION FORM

For our company to provide the most effective service possible, we ask you to review and complete all the necessary steps listed below. The following steps will ensure that your technician is able to provide an effective and safe treatment.

### How to Pest Proof & Prepare for the Service

Install insect screening over air vents that lead to the outside

#### ATTIC

- ▶ Allow safe access to the attic door for your technician.

#### INSIDE/OUTSIDE:

- ▶ Have the blinds up or removed.
- ▶ Have drapes open or removed.
- ▶ Have nothing sitting on the window sills (such as picture frames).
- ▶ Move furniture away from the window if it sits in front or close to it.

#### DOOR & WINDOW SCREENS

- ▶ Ensure that all screens fit properly and have no cracks or holes.
- ▶ Weather strip windows, doors, light fixtures, and wall plates.

---

## After the Treatment

---

The treatment will remain effective only if the following steps are taken after your home is serviced:

- ▶ **DO NOT** use other pest control chemicals (powders or sprays) or cleaning products anywhere near the

treatment, as this will decrease effectiveness.

- ▶ Vacuum all dead cluster flies. Discard vacuum bags immediately upon completion.

---

## Reminder

---

### For INDOOR treatment, including the attic

- ▶ When a spray is applied inside your residence, you and your pets will be required to vacate the premises. Typically, a 4-hour window is sufficient. However, your representative will advise you at the time of service or leave an information notice at your premises if additional time is required.
- ▶ Persons with underlying health conditions should consult their family physician if they are concerned about re-entry time.

- ▶ Upon re-entering, please open the windows for 20-30 minutes.
- ▶ Fish aquariums may be left on-site. However, they should be covered, and air filters disconnected.

---

## What You Can Expect from the Treatment

---

- ▶ A complete interior and exterior inspection will be completed to locate the sources of cluster fly activity. Your technician will use a number of methods

to control the pest depending on each unique situation.

---
