

Rodent Treatment

CLIENT PREPARATION FORM

For our company to provide the most effective service possible, we ask you to review and complete all the necessary steps listed below. The following steps will ensure that your technician is able to provide an effective and safe treatment.

How to Prepare for the Service

Do not remove rodent droppings from any areas before inspection, this will allow the technician to determine activity, population, etc.

KITCHEN & BATHROOM

Empty only the ground-level cupboards and drawers of all dishes, pots, pans, cans, food, etc.

LAUNDRY ROOMS

Remove any obstacles near or around laundry machines.

ATTIC

Remove any obstacles around or leading to the attic access door.

BATHROOM

Clear out all items from your cabinets and sink vanity drawers.

GARAGE

Remove any obstacles on the ground level near or around the inside walls (those walls that are attached to the home).

The garage should be free of any vehicles before the inspection.

BASEMENT & CRAWLSPACE

Remove any obstacles near or around electrical panels, furnace units, and air exchange units.

After the Treatment

The control program will remain effective only if the following steps are taken after your residence is serviced:

- ▶ **DO NOT** move any of the stations or traps.
- ▶ **DO NOT** use any other rodent control products (this can work against the control measures put in place).
- ▶ Follow the technician's recommendations for any repairs needed to close entry points.

- ▶ Remove all competing food sources (this means keeping all pet foods in tightly sealed containers, cleaning up spills as they occur, removing the trash regularly, etc.).
- ▶ Your technician will return after the extermination is complete to remove all baits and traps. This should be arranged before service.

Allergen Notification

Some of the products we may utilize during our treatment may contain allergens such as wheat, soy, peanuts, and shellfish. Please alert your technician and superintendent where concerns over allergens exist before the treatment.

Reminder

You or your pets don't need to leave your home before, during, or after the treatment. However, children and pests must not be in the same room/area during the treatment.

Please be patient. Depending on the infestation level and species of rodent, effective control may take 1-2 months.

What You Can Expect from the Treatment

- ▶ Your technician will use a number of methods to control the pest depending on each unique situation. Please do not move or tamper with any traps, monitors or products applied by your technician. These have

all been strategically positioned to maximize their effectiveness. All treatments are made with your safety in mind to ensure your health.
