

# Tick Treatment

## CLIENT PREPARATION FORM

In order for our company to provide the most effective service possible, we ask that before our arrival you review and complete all the necessary preparations listed below. The following steps will ensure that your Technician is able to provide an effective and safe treatment.

## How To Prepare For The Service

### INTERIOR TREATMENT (if applicable):

Infected pet bedding should be carefully washed and dried or disposed.

**PLEASE NOTE:** This treatment is a Tick Management Program only and not an elimination solution. Due to outdoor environmental conditions, Abell Pest Control cannot guarantee a complete elimination of the pest. Your Technician will work with you to identify areas of concern and make the appropriate recommendations to help in the process of keeping the Tick population under control.

## What You Can Expect From The Treatment

Majority of the time a liquid spray will be used and is the most effective treatment to take control. All treatments will be made with your safety in mind to ensure your health.

---

## After The Treatment

---

- ▶ **DO NOT** use other pest control chemicals (powders or sprays) or cleaning products anywhere near spray treatment, as this will decrease or eliminate their effectiveness.
- ▶ **DO NOT** cut, mow or water the lawn for 24 hours after treatment.
- ▶ Some treatment may leave streaks on the outside windows; refrain from cleaning the windowsills but the glass can be cleaned with a damp cloth & warm water. (Please be sure to exercise safety first and use rubber gloves when cleaning the spray treatment.)
- ▶ Eliminate the leaf litter from the exterior perimeter.
- ▶ Remove any insect remains and vacuum appropriately.

---

## Reminder

---

### If only the outside is being treated:

You and your pets can stay inside your home during the treatment. Please make sure to keep all windows and doors closed during the outdoor treatment process. Refrain from walking on the treated areas until fully dry. (This can take several hours depending on outdoor weather conditions.)

### If both indoors & outdoors are being treated:

It is necessary for you and your pets to leave your home for 4 hours once the treatment begins. Fish aquariums maybe left onsite, however they should be covered and air filters must be disconnected. Persons with underlying health conditions should consult their family physician where they have concerns regarding re-entry time. Upon re-entry, please open windows for 20 min to properly ventilate the treated rooms.
